## Annual Report of Activities Conducted under the Cooperative Aquatic Plant Control Program in Florida Public Waters for Fiscal Year 2022 - 2023

This report was prepared in accordance with §369.22 (7), Florida Statutes, to provide an annual summary of plants treated and funding necessary to manage aquatic plants in public waters. The Cooperative Aquatic Plant Control Program administered by the Florida Fish and Wildlife Conservation Commission (FWC) in Florida's public waters involves complex operational and financial interactions between state, federal and local governments as well as private sector companies.

The FWC receives some federal funding through the U.S. Army Corps of Engineers (USACE) and the USACE directly funds and controls aquatic plants, employing USACE management crews in much of the St. Johns River and its tributaries. All of the public waters managed by the USACE are also eligible for state funding through the Cooperative Program and the FWC occasionally assists in control operations in these waters. FWC staff monitors plant populations and control efforts and reports USACE contribution to state funding for control of aquatic plants. Management operations and expenditures are reported for the state fiscal year that extends from July 1, 2022 – June 30, 2023, although local and federal governments and water management districts operate on a fiscal year that runs from October 1 – September 30.

Waters eligible for funding under the Cooperative Program include those on sovereignty lands accessible via public boat ramp, as well as waters that are designated Fish Management Areas and waters that lie within FWC Wildlife Management Areas. While control activities and expenditures are reported for the state fiscal year, plant presence and abundance are reported on a seasonal basis to better compare plant growth and management response through an annual growth cycle. Invasive aquatic plants are inventoried each year in Florida's 464 public lakes and rivers that cover approximately 1.27 million acres. Inventories are conducted during the peak growing period, from April through November. These inventories provide a mechanism for early detection and rapid response to control new invasive plant introductions before they become established and require long-term and/or large-scale management. For invasive plant populations that are already established, inventories provide information to develop management priorities and document funding needs on a statewide basis. Finally, annual aquatic plant inventories document changes in plant communities in response to management efforts as well as changes that may occur in waters where no control has been implemented.

FWC's aquatic plant management program mission is to reduce negative impacts from invasive nonindigenous plants like water hyacinth, water lettuce and hydrilla to conserve native habitat and the multiple uses and functions of public lakes and rivers. FWC biologists work with stakeholders to identify the primary uses and functions of each public waterbody. Aquatic plant populations are inventoried at least once each year in these systems to determine the waterbody's status regarding invasive plants. Management objectives are then developed for each waterbody and funding is allocated to address statewide management priorities for the ensuing fiscal year. Invasive plants infest 95.4% of Florida's 454 surveyed public waters inventoried in 2023. Once established, eradicating invasive plants is difficult or impossible and very expensive; therefore, continuous

maintenance is critical to keep invasive plants at low levels to sustain attributes like navigation, flood control and recreation while conserving native plant habitat for fish and wildlife. A detailed description of the uses of Florida waters, how aquatic plants may impair these uses, aquatic plant control options, management plan development, and research and outreach efforts is presented in the following website designed and maintained in a collaborative effort between FWC and the University of Florida, Center for Aquatic and Invasive Plants: [Plants.ifas.ufl.edu/manage](https://plants.ifas.ufl.edu/manage).

A summary of plant control in sovereign public waters and associated expenditures contracted or monitored by the FWC during Fiscal Year 2022 - 2023 is presented in the following pages. Management statistics are summarized in Tables 1-4 and presented graphically in Figures 1-4. FWC's highest management priorities (established in rule under section 68F-54.005 F.A.C.) are the control of floating plants (water hyacinth and water lettuce) and hydrilla. "Other plants" listed in the tables include both native and nonindigenous plants that may impair the uses of Florida public waters.

The information in this and previous years' reports can be accessed on an interactive map titled, "What's Happening on my Lake". This map contains general waterbody information, aquatic plant management yearly workplans, aquatic plant survey data, fisheries monitoring data, bathymetry, boat ramp information, and aquatic plant management yearly control summaries. The What's Happening on my Lake map can be viewed following [MyFWC.com/lakes](https://MyFWC.com/lakes).

FWC maintains an electronic database of plant management information. Any future data revisions due to data entry or other errors will be reflected on "What's Happening on my Lake" and will not be reflected in this static report.

## Tables and Figures

The following tables and figures are summaries for the Aquatic Plant Control Program operations in fiscal year 2022 - 2023. **Table 1** presents the amount of control and associated funding for each plant type within the boundaries of the five water management districts to provide some geographical perspective on where plants are controlled in Florida. **Table 2** breaks down aquatic plant management expenditures by federal and state funds. Twelve aquatic plant species found in Florida are considered to be invasive in that they are capable of causing environmental or economic harm if not managed on a routine basis. Some are widespread like floating plants or hydrilla and are under continuous maintenance; others are present in only a few locations and are under eradication programs to prevent them from becoming established in Florida waters. **Table 3** lists individual plant types found in Florida public waters summarizing acres controlled and associated control expenditures for Fiscal Year 2022 - 2023. **Table 4** lists management expenditures by waterbody, including assessment and monitoring costs.

**Figure 1** shows the ranges in size of the water hyacinth populations reported in Florida public lakes and rivers in 2023. Although these plants are widespread, found in 256 public waters, most populations are being suppressed to fewer than ten acres, keeping overall management costs and environmental impacts at low levels. **Figure 2** shows water hyacinth cover in Florida public waters in ten-year intervals dating from 1947 through 2023 to give an historical perspective of the presence of this prolific plant species through the decades. The Maintenance Control management philosophy was implemented for floating plants in the early 1970s - control invasive plants on a statewide coordinated, routine and consistent basis - to reduce the overall population from about 125,000 acres in 1959 to a few thousand acres at any one time for the past 45 years.

**Figure 3** shows acreage ranges for the 179 hydrilla populations that were reported in public lakes and rivers in 2023. 73.2 % of all hydrilla populations observed in 2023 covered fewer than ten acres. **Figure 4** compares funding for hydrilla control vs. acres of hydrilla reported in public waters from 1982-2023. When funding is adequate, hydrilla can be suppressed at low levels. When funding is insufficient, hydrilla expands and forms underground tubers that can persist for many years, representing the potential for immediate regrowth after control, and the need for prolonged higher levels of management funding until these tuber “banks” are depleted. The estimated tuber bank has continued to be reduced from historically higher levels.

Most of the aquatic plant control achieved by the FWC is through the use of herbicides registered for use in water by the U.S. Environmental Protection Agency and the Florida Department of Agriculture and Consumer Services. The FWC authorizes herbicide use for aquatic plant control under coverage of Generic Permit #FLG510039-IWPG issued by the Florida Department of Environmental Protection pursuant to National Pollutant Discharge Elimination System (NPDES) regulations. The Generic Permit requires entities responsible for applying herbicides to waters of the U.S. to take measures to reduce herbicide use where appropriate. The FWC meets this obligation by practicing proactive management and integrating non-chemical technologies where possible under maintenance control programs to keep invasive and nuisance plants under control in Florida public waters. The

FWC continues to meet management objectives for these species while reducing overall control expenditures and herbicide use. When the highest priority species are kept at minimal levels, additional funding can be directed toward managing emergent and upland invasive plant species to further conserve or enhance fish and wildlife habitats.

## Year in Review - Fiscal Year 2022 - 2023

- **Invasive non-native plants** were reported in 95.4% of Florida's 454 surveyed public lakes and rivers that comprise 1.27 million acres of fresh water.
- Eradicating established invasive aquatic plant populations has proven nearly impossible; therefore, routine maintenance is needed to suppress invasive plants at low levels to sustain attributes like navigation, flood control, and recreation while conserving native plant habitat.
- **Floating water hyacinth and water lettuce**, two of the world's fastest growing plants, covered as much as 125,000 acres of Florida public waters as recently as 1959 and therefore are the FWC's highest management priorities.
- These plants were present in 256 public lakes and rivers in 2023 covering about 2,074 acres. 86.7% of the floating plant populations reported in 2023 covered 10 acres or less. (Figure 1)
- Managers spent approximately \$3.69 million controlling 20,010 acres of floating invasive plants in Florida public lakes and rivers during FY 2022 - 2023 (Tables 1-3).
- **Submersed hydrilla**, imported during the 1950s as an aquarium plant, is capable of growing several inches per day filling the water column and covering the surface of water bodies that are not frequently and routinely managed.
- Insufficient funding allowed hydrilla to evolve into statewide water and habitat management crises by the middle 1990s infesting about 100,000 acres in 365 (80%) of Florida's public lakes and rivers. Sufficient, recurring funding and improved technology aided by FWC-funded research enabled managers to reduce hydrilla to about 47,232 acres in 2023. (Figure 4)
- Hydrilla was reported in 179 public waters in 2023. The majority of these public waters were managed to target goals; however, several waterbodies, such as Lake Tohopekaliga and Orange Lake, were not managed in 2023 due to funding issues. In all program waterbodies, tubers infest about 68,568 acres and represent the potential for immediate regrowth.
- 73.2 % of the hydrilla populations reported in 2023 covered 10 acres or less (Figure 3). 42.7 % of the hydrilla reported in 2023 occurred in the four lakes of the Kissimmee Chain of Lakes, among Florida's largest and most important multi-purpose waterways.
- Managers spent \$13.4 million controlling 26,448 acres of hydrilla in Florida public lakes and rivers during FY 2022 - 2023 to conserve the multiple uses of these resources (Tables 1-3).
- The Florida Exotic Pest Plant Council lists **12 Category I invasive plants**, capable of disrupting aquatic ecosystems and causing harm in Florida public waters. 10 Category I plant species in addition to hydrilla, water hyacinth were detected covering about 14,325 acres in 93 % of Florida's public waters in 2023.

- \$2.7 million were spent managing about 5,845 acres of aquatic plants other than hydrilla and floating plants during FY 2022 - 2023 (Tables 1-3), most for the control of tussock-forming plants like bur head sedge, exotic ludwigia, frog's bit and tropical American water grass in Florida's waters to conserve fish and wildlife habitat and navigation in the extensive marsh systems of these waters.

## Fiscal Year 2022 - 2023 Management Statistics

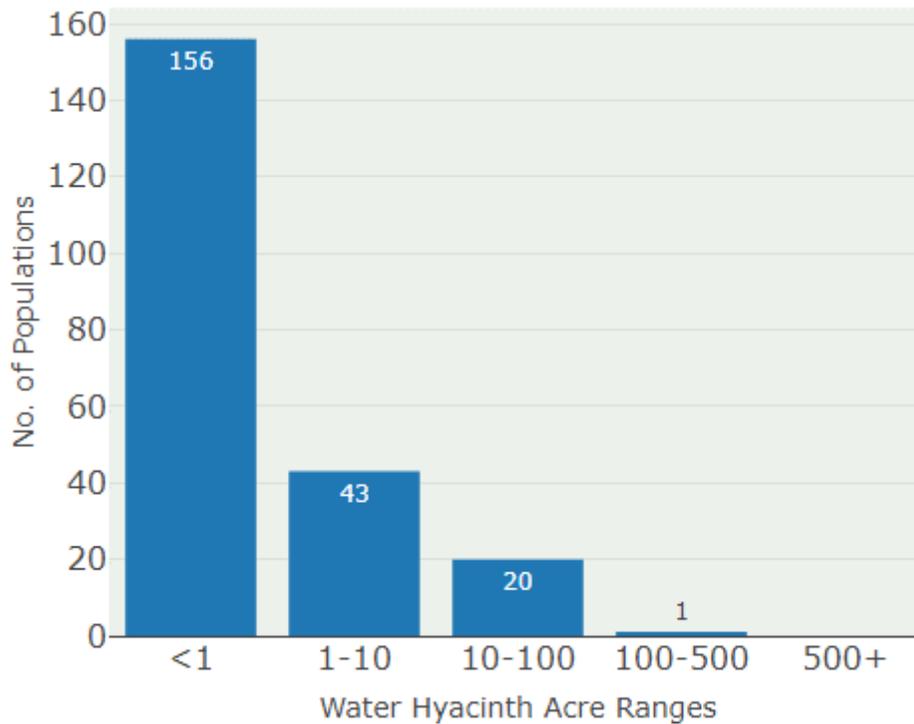

**Table 1: Treatment Expenditures and Acres of Aquatic Plants Treated in Florida Public Waters during Fiscal Year 2022 - 2023 by Region**

<b>Expenditures</b>	<b>Northwest</b>	<b>S. Florida</b>	<b>St. Johns</b>	<b>Suwannee</b>	<b>Southwest</b>	<b>TOTAL</b>
Admin	\$0	\$93,843	\$18,700	\$0	\$15,662	<b>\$128,204</b>

Other	728.0	2,915.9	797.9	235.1	1,168.1	<b>5,845.0</b>
<b>TOTAL</b>	<b>1,081.2</b>	<b>16,470.9</b>	<b>20,565.7</b>	<b>854.3</b>	<b>13,330.6</b>	<b>52,302.7</b>

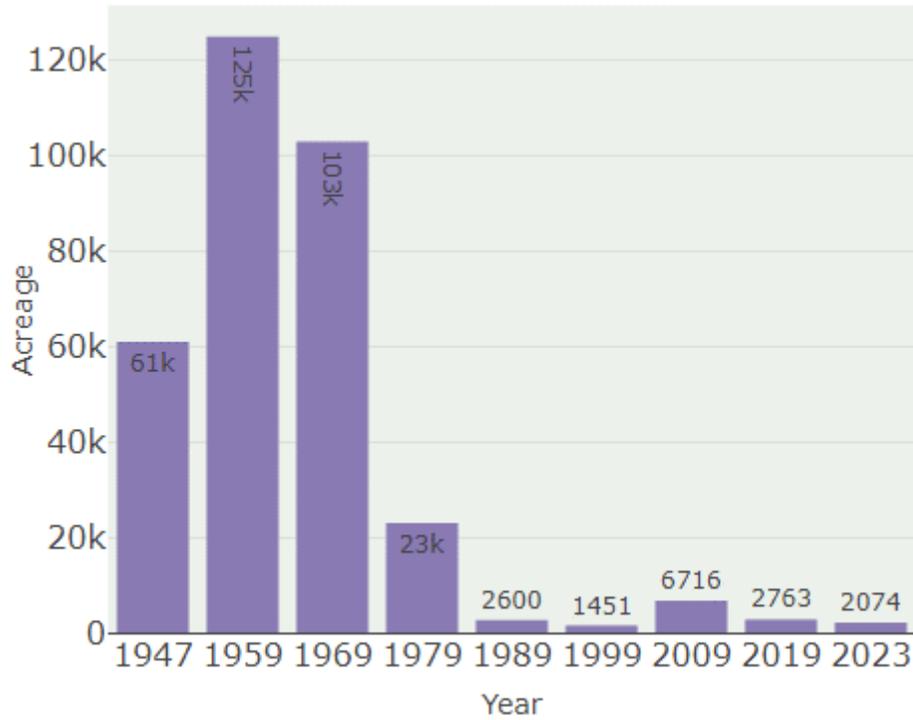

## Water Hyacinth

**Figure 1: Number of Public Lakes and Rivers in which Water Hyacinth was reported in 2022 - 2023, reported by Range of Population Size.**

156 of the 220 Water Hyacinth populations reported in 2023 covered less than one acre. Waters with larger floating plant levels reported in 2023 are high priorities to maintain control in 2023

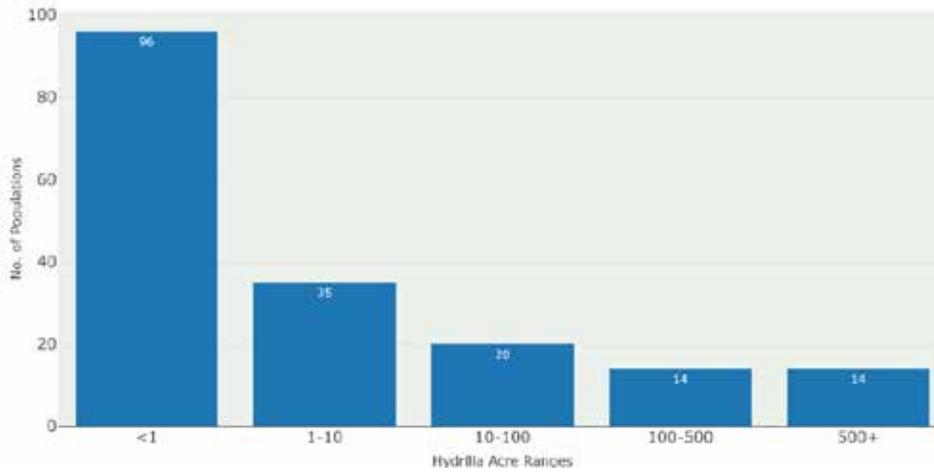

**Figure 2: Acres of Water Hyacinth Reported in Florida Public Lakes and Rivers from 1947-2023.**

Water hyacinth reached its apex, covering more than 125,000 acres in 1959. Frequent and consistent management efforts coordinated on a statewide basis have allowed managers to reduce the standing crops of water hyacinth and water lettuce to low levels where they do not impair the multiple uses of Florida waters.

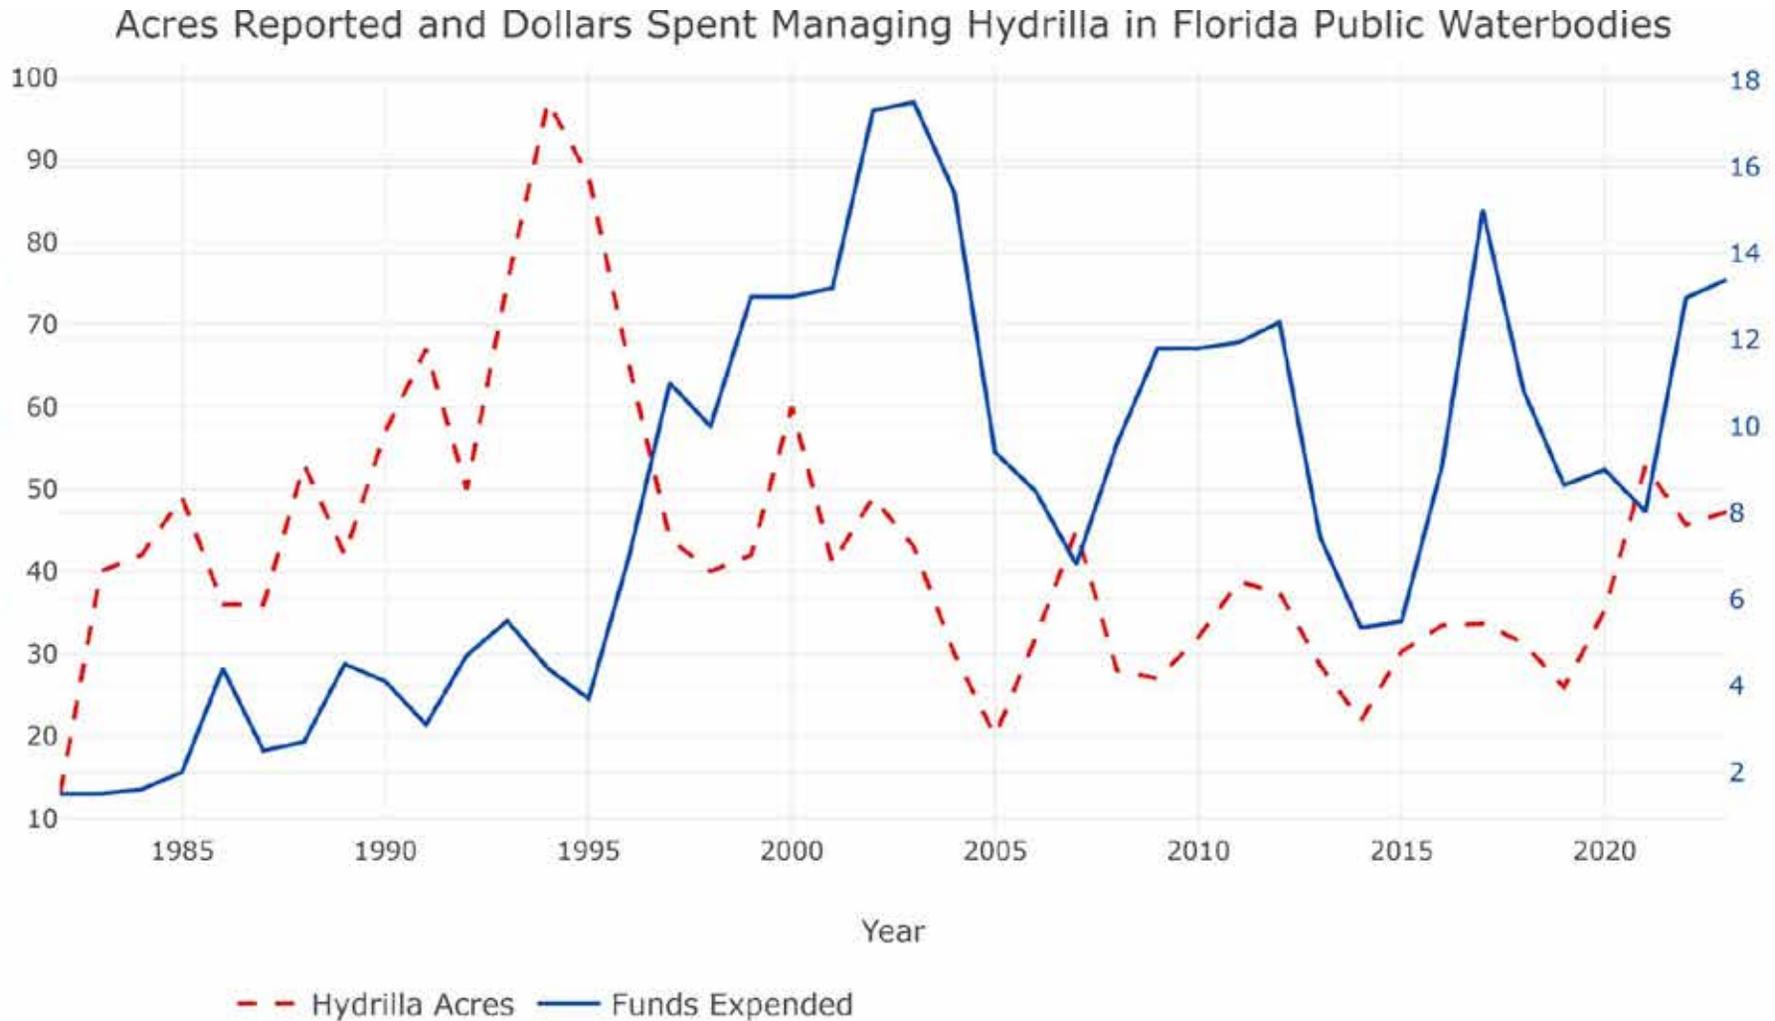

## Hydrilla

**Figure 3: Number of Public Lakes and Rivers in which Hydrilla was reported in 2023; Reported by range of population size.**

139 of the 179 hydrilla populations reported in 2023 covered less than 10 acres, signifying that most are under maintenance control or have met target goals and are at very low levels. Populations exceeding 100 acres are the higher management priorities for 2023.

**Figure 4: Acres Reported and Dollars Spent Managing Hydrilla in Florida Public Lakes and Rivers from 1982-2023.**

When funds are sufficient, hydrilla can be managed at a low level. When funds decline, hydrilla expands to a high level requiring additional recurring funding for control. Hydrilla reached its apex in Florida public waters in 1994, covering nearly 100,000 acres. Although the standing crop in the collective 179 waters in which hydrilla was reported in 2023 totaled about 47,232 acres, underground tubers, that represent hydrilla’s ability to immediately sprout and refill the water column, are estimated at about 68,568 acres.

**Table 2: Federal and State Funds Expended during Fiscal Year 2022 - 2023 to control Aquatic Plants in Florida Public Water Bodies.**

<b>Plant</b>	<b>Federal</b>	<b>State</b>	<b>Federal+State</b>

**Table 4. Plants Controlled and Management Expenditures by Waterbody in Florida Public Waters during Fiscal Year 2022 - 2023**

Key	Description
Waterbody	Name of public waterbody
Waterbody Acres	Surface acres of public waterbody
Contractor	Agency or company that conducts aquatic plant management
AA	Applied Aquatic Management, Inc.
AVC	Aquatic Vegetation Control, Inc.
Brevard	Brevard County
CAS	Coastal Air Services
Citrus	Citrus County
CLR	CLR Aquatic Weed Control, Inc.
FL Env.	Florida Environmental Consultants, Inc.
Highlands	Highlands County
Lake	Lake County
Orange	Orange County
Palm Beach	Palm Beach County
Polk	Polk County
SFWMD	South Florida Water Management District
SJRWMD	St. Johns River Water Management District
SWFWMD	Southwest Florida Water Management District
TAH	Texas Aquatic Harvesting
USACE	U.S. Army Corps of Engineers
Winter Park	City of Winter Park
County	County in which the waterbody lies (Note: many water bodies lie in more than one county, for example: the St. John's River lies in 11 counties, but for convenience has been assigned to St. Johns County)
WMD	Water Management District in which the waterbody lies
Plant Type	Name of plant (note: floating plants=water hyacinth and/or water lettuce)

Key	Description
FY2022-2023 Acres Treated	Sum of acres of plants managed during fiscal year 2022-2023
FY2022-2023 Dollars Spent	Sum of dollars spent managing plants, including assessment and monitoring, during fiscal year 2022-2023
*	Costs associated solely with survey/inspection of waters or snagging of trees where acreage is not reported
**	Zero dollar costs from FWC staff labor or donated time from other gov't cooperators
